

Structure of a Link

```
<a href="https://google.com">  
  Click Me  
</a>
```

Preview

[Click Me](https://google.com)

HTML Attributes

```
<a href="https://google.com">
```

Attributes go *inside* the opening tag

href=

Attributes have a *name*

href="https://google.com">

Attributes have a *value*

General format: **name="value"**

Example: **href="https://google.com"**

This tag's reference (`href`) is google.com

It *links* or *points* to google.com

Structure of a Link

```
<a href="https://google.com">
```

Click Me

```
</a>
```

The `<a>` tag *annotates* the Click Me text to make it a hyperlink to google
